

# R in 3 Months: Week 4 (Data Viz)

### Agenda

- 1. Housekeeping
- 2. Four Tips
- 3. Workflow Advice
- 4. More example data visualizations from David and Charlie
- 5. Next Week

### Housekeeping

 Next week we won't have a live session, but you can book a one-to-one with Charlie

### **Four Tips**

### **Updating columns**

#### There's a base R way of doing things

```
your_data$question_12 <- as.numeric(your_data$question_12)
```

#### ... and there's the tidyverse way of doing things

```
your_data <- your_data %>%
  mutate(question_12 = as.numeric(question_12))
```

### coord\_flip() is no longer necessary

In <u>March 2020 ggplot2 3.0 was released</u> and removed the need to use coord flip().

# "Removed XX rows containing non-finite values (stat\_bin)"

## Warning: Removed 2 rows containing missing values (geom point).

## Handling SPSS files with labelled columns

### Save Source, not Workspace

Why do we not want to reload our data when we start RStudio?

Source: <u>rstats.wtf</u>

### **Data Viz Examples**

### Oregon by the Numbers Example

### Using conditions in aes ()

### **Data Visualization Questions**

What questions do you still have?

### **Next Week**

- 1. 2 Catch up week. 2
- 2. No additional assignments, but please complete anything you're behind on
- 3. No live session
- 4. Office hours will happen
- 5. Book a one-to-one session with Charlie: <a href="reformation-reformation-reformation-reformation-">reformation-
